

"Gwen is an excellent worker and engineer. She has incredible attention to detail and great customer service skills. She routinely handled a case load that was greatly in excess to the other engineers on the team with no trouble while still finding time to assist her peers. Gwen is a problem solver and loves the "puzzle" of figuring out an engineering issue and is not afraid to seek assistance from any source. She is an excellent engineer." Terry Brien, *Customer Services Manager 3, Sun*

"I had the good fortune to find Gwen three years ago when my company was in its start-up phase, and she has proven time and again to have the answer to virtually any computer-related need we have come up with. She has assisted our business in numerous ways - including the development of firm-standard work product templates, consultation on web page updating, design of special graphics and marketing materials, and making many a work product look great. She excels not only in finding technical solutions, but also in teaching me and my staff how to do it ourselves, which has greatly improved our efficiency for the long run. Linked In forced me to only pick her three top attributes in making this recommendation, but in fact I could have checked the box for all of the attributes listed because she has them all." John Culbertson hired Gwen as a IT Consultant in 2006, and hired Gwen more than once

Communicator

- Other engineers at Sun frequently handed over off their intensive Customer Facing cases to me.
- Wrote/write manuals , white papers, and technical articles.
- Receive repeat requests for paid book reviews. Repeat requests to evaluate tests.

Researches and Analytically Solves Problems

- Solved performance problems and analyzed core files.
- Pulls together and distills information from a variety of sources to create training courses and documentation.
- Create analogies to breakthrough the fog and focus a beam of true understanding.

Manages Priorities While Maintaining Organization, Flexibility, and Creativity

- Receive referrals and compliments for taking chaotic non-profit websites and converting them into professional sites while keeping clients happy and missions intact.

Takes Initiative and Willing to Take Risks

- Does what is needed to solve problems.
- Takes on projects to see if they'll work out and be useful.
- Willing to toss work and start over when needed.
- Started a company with three others.

Maintaining balance and freshness

- I homeschool my children to create the ultimate learning experience for them. My passion for this ensures I keep up with the latest news in general science, technology, geology, education, creativity, and neurology. It also fuels my inborn desire to learn new technologies.
- The total work output from my homeschool teaching and extensive volunteer work greatly surpasses the amount of work delivered by the common "40-hour-a-week" employee. I embrace fulfillment..
